AccdbMerge Download With Full Crack is a simple tool that can quickly merge two Microsoft Access database files, in two projects. AccdbMerge Free Download enables you to compare tables and query structures, while excluding duplicates or desired records. In addition, the software is designed to perform batch data differencing. It is easy to use and requires minimum technical knowledge.

AccdbMerge is a powerful and intuitive program for performing several operations. In order to start, you can easily select one or more database files or compare databases in Batch Data Diff mode. In case you need to compare objects that can not be selected, you can open selected objects in table structure window. Moreover, the application also features a built-in comparison tool for queries, which allows you to create new queries. In addition, you can easily search for duplicates in selected tables and eliminate them from the comparison process. Alternatively, you can match the comparison results with the information from a previous analysis. Moreover, AccdbMerge also offers support for batch table differential comparison, by providing you with the options to include or exclude desired records. You can also save the settings, in order to load the same files in the future. If you wish to merge the same file(s) again, you can easily switch to the comparing mode, in order to start the operation. AccdbMerge Benefits: AccdbMerge runs in the background and enables you to immediately start the comparing process. The application offers support for merged.MDB and.ACCDB files. The program can open and compare various Microsoft Access database formats, aside from the basic.MDB and.ACCDB files. The tool can process not only databases, but also indexes, queries and relationships from table structure window. AccdbMerge is a reliable program that enables you to quickly join the information and structured from multiple Microsoft Access database files, in two projects. The application can perform

advanced data differencing, in order to avoid duplicate entries. Moreover, the program offers support for batch data differential comparison. Intuitive interface which facilitates access to various functions AccdbMerge features a user-friendly interface which offers a comprehensive view of the tables and the contained data. You can easily merge two files or compare numerous tables in Batch Data Diff. This function can provide you with additional information, since you can query data. Alternatively, you can use the Custom Data Diff, in order to compare tables and queries, after mapping the fields. You need to specify a mapping type key and process at least one field. The software can open password-protected files and compare them in two parallel projects. You may save the settings, in case you often work with the same protected files. Supported database formats and structures AccdbMerge can process compiled.MDE and.ACCDE files, aside from the basic.MDB,.ACCDB formats. You can select which objects you wish to include in the differencing process, by checking/unchecking the box next to them. Tables, relations, queries, forms, reports, macros, modules and references can easily be compared, from each database. In the case of.MDE and.ACCDE files, however, the software does not support processing modules, forms and reports. AccdbMerge features an individual function for comparing queries, which can be accessed from the toolbar at the top of the window. You may easily define the query key fields, in order to identify query rows, as well as new or changed records. Indexing and command line support AccdbMerge also allows you to compare and merge indexes or relationships from table structure differencing window. Moreover, it offers support for operations performed via command line arguments. You can open AccdbMerge projects in a differencing viewer mode, which allows you to control system clients.
