Virtual desktop computing is a way to put several virtual machines running on the same physical system. What is Virtual Desktop Computing (VDC)? Virtual Desktop Computing (VDC) is a method for combining desktop virtualization and network virtualization technologies to enable multiple operating systems to be installed and used simultaneously on the same physical system. Take virtual machines out of your desktop. Virtual desktop computing frees you from managing multiple operating system installations and desktop computers. Instead, with VDC, your operating system image is part of a virtual machine, which is installed and managed separately from your physical machine.
