I'm reading in a graph with vertices and edges, and I want to handle it in the following way: If the edge is not a diagonal, join the two vertices in question If the edge is a diagonal, keep only the first vertex If the edge is a square, keep only the top left vertex Any advices on how to do it? My code now is:

```
public static List analyzeGraph(List graph) { List ret = new ArrayList(); //process the outer nodes for (VertexInfo v : graph) { ret.add(v); if (v.isNonDiagonalEdge()) { ret.add(v.getLeftVertex()); ret.add(v.getRightVertex()); } if (v.isDiagonalEdge()) { if (v.isLeftVertices()) {
```
