Unlike some of the other Adobe apps that run from a subscription basis and use regular PC hardware, Photoshop has always allowed users to run the program on Macs. And even on Windows PCs, Photoshop for many years has run from a disc, so it's always been easy to re-install on new machines. Though Photoshop ultimately is still largely dependent on Windows, it can serve as a gateway into macOS to enable Windows users to operate a powerful discontinuous-rotation editing system. Adobe released Photoshop to macOS in early 2018, and the Mac version is offered as a downloadable discless-version or as a fully functional web-version with subscription. At this time, Adobe Photoshop only has a Photoshop web-service model for use on macOS, without a disc. The solution that is almost universally offered by the company along with the standard Mac App Store solution is less complex and therefore less expensive. Adobe has plans to move beyond its web-service subscription model to a Mac App Store release for Photoshop, which is slated for October 2020. Adobe is offering a choice of subscription models for Photoshop along with the standard perpetual-license options. If you're a desktop Mac user, there really aren't many good reasons not to subscribe to the $9.99 monthly subscription, and the same probably can't be said for Windows users, whose subscription prices appear to be even higher. A subscription to Photoshop is a viable avenue for many cost-conscious users to get to the editing power of the product. You'll also get access to the user-customizable Creative Cloud service. It's a great way to get the product's exclusive features, like sharing, being able to create content for the web without having a one-time payment and more for a one-time cost.
